

W Series Pole Mount

The "W" Series Pole Mount allows electric infrared fixtures to be installed in open areas traditionally reserved for gas or propane units.

They are frequently installed on the sides of decks or patios, to keep the area warm, without detracting from the view or creating clutter.

The heater support bracket incorporates swivel brackets allowing the heater to be positioned at the most appropriate angle. This improves efficiency and minimizes wasted energy.

The attractive pole is constructed of cold rolled steel with an exterior grade Polyester TGIC powder coating, to provide years of trouble free service. Each pole comes ready to accept internal wiring and an optional heat output regulator.

Over all height is approximately 85". Base plate is 12" x 12" with pre-drilled mounting holes.

Standard color is gloss white.

Custom configurations and heights are available by quotation.

Item #	Model	Ship Weight
22-1250	W-20 Pole Mount	125 lbs
22-1255	W-30 Pole Mount	125 lbs
